

1% more returns makes a huge difference

Getting even 1% more every year makes a big difference, because of the magic of compounding.

Consider this example. Rs. 5000 is invested every month in 2 similar investments. One investment gives a return of 10% p.a. while the other gives 11% p.a. At the end of 30 yrs the 2nd investment makes 24% more money than the first investment!!!
