

China's Cyber War Capability

China's Cyber Warfare Doctrine is designed to achieve global "electronic dominance" by 2050

Global Rating in Cyber Capability: No. 2

Budget: \$55 Million

Cyber Weapons Arsenal:

- Large, advanced BotNet for DDoS and espionage
- Electromagnetic pulse weapons (non-nuclear)
- Compromised counterfeit computer hardware
- Compromised computer peripheral devices
- Compromised counterfeit computer software

Games Under Threat

Suspected Chinese hackers were traced downloading tender documents for the Commonwealth Games network infrastructure. Intelligence agencies feel this could be for studying vulnerabilities in the system for possible attacks.

is believed to include classified internal presentations and e-mails sitting on the computers of top officials. All of this would not only yield valuable intelligence but also the thought process in the highest levels of the Indian strategic establishment. The infected computers and servers were taken offline but the damage, evidently, was done. "China has launched cyber-aggression against India," an incensed Narayanan said in January.

Such aggression is, in intelligence lingo, "plausibly deniable", allowing governments to legitimately distance

themselves. That is what makes cyber warfare such an attractive proposition. The attack on the computers of India's security establishment was traced down to Chinese hackers who are widely known to function as a covert arm of the People's Liberation Army Navy (PLAN). "Just as Pakistan uses its jihadi terrorists, China uses its cyber warriors for plausible deniability," an intelligence official says.

Pakistan has an almost negligible offensive presence in cyberspace, but the Chinese have a cyber army estimated by western agencies to include

“ There is nothing to stop China unless we keep developing our prowess in cyber warfare along with other ingredients of comprehensive national power. ”
