

# Summer Chillers

The summer is not just about mangoes, holidays and cold shakes. It is also about the harsh blazing sun, rising temperatures and weather conditions that can affect your health, hair and skin. To make matters worse, this year, summer has had an early arrival.

A good diet is an essential part of family health care, summer time is no different. Eating sensibly ensures that you maintain a strong immune system and build up resistance. Heat generating food should be strictly prohibited and fresh herbs, juicy fruits along with good intake of fluids can help bring down overall body temperature. Use of fabrics like crisp cotton in pastel hues is another solution to combat rising temperature while remaining effortlessly stylish. While food, drink and apparels are fantastic; it's the sumptuous interiors that are also creating the new buzz.

There is nothing quite like coming home in the heat of a steaming hot summer day, and being greeted by a blast of cool air as you go through the front door.

Earlier, air conditioners came with the sole purpose to beat the heat. They could be used only in summers to beat the scorching heat, but with technological advancements things are very different today. Now air conditioners come loaded with host of features, they can change their temperatures automatically with the change in outside temperatures, they can also be used in winters with the temperature in the room so maintained that one feels at ease.

Even in rainy season humidity can be controlled in rooms with these automatic adjustable air conditioners. Air conditioners are not just an added feature in the room's interiors, they have gradually become a part of life.

The latest technology is empowered with a lot of features, coming with multi functional gadgets, which are not only trendy, but are quite modified suiting the needs of the tech-generation. No wonder, there has been a flood of consumers, desiring and availing these products. Brands are addressing these needs and are neck to neck when it comes to delivering the best this summer.

Samsung holds the distinction of being one of Asia's top brand in the consumer electronics. It is set with the commitment to bring the best products to India this summer. Stabilizer free, bio sleep AC with high end features can be seen in the market this year.

- **Stabilizer Free** : The World's first S-UTR™ compressor in Samsung air conditioners withstands voltage fluctuations as low as 135V to as high as 290V and reduces the need for an additional stabilizer during power fluctuations.

- **54°C S-UTR** : Samsung developed the S-UTR™ (Ultra Tropical Rotary) compressor featuring incredible power that can quickly cool the air even in severe hot climates. The S-UTR™ with its

high torque motor has the reliability to maintain superb performance even in severe temperatures of up to fifty four degree centigrade for a long time. The latest S-UTR™ succeeded in saving energy consumption and increased energy efficiency by ten percent.

- **Biosleep** : Samsung's Biosleep ensures your environment stays at the most comfortable temperature with automatic humidity adjustment to guarantee a good night sleep.

No Stabilizer required!  
Cools even at 54°C
