

• **S-Touch of Colour:** Samsung has created a new design of air conditioner for an ultra modern lifestyle. Unlike the usual flat white look, it has specially designed the front panel of its air conditioners with a touch of colour. This sophisticated and colourful look adds a touch of class to the homes and is available in six elegant colours: Cherry Wine; Copper, Black, Chocolate Brown, Pearl White

• **Smart Saver:** Save up to thirty one percent on your electricity bill. Smart Saver operates the air conditioner automatically in the least amount of time necessary to cool the room, which saves electricity. With the Smart Saver, you can stop worrying about your electricity bill and start enjoying cool comfort.

India ka dil. India ka AC.

Voltas unveils its 2010 range of Air Conditioners. Voltas, a Tata Group company, has launched its new range of fifty Air Conditioners models for the coming summer season, with a generous array of choices in terms of features, tonnage, price and other parameters. It will be a customers delight to choose from a range of fifty new models.

With a plethora of options available to choose from in the star rated category, going by the energy labeling mandate enforced by Bureau of Energy Efficiency. Every Voltas Air Conditioners comes with sensible cooling technology comprising of efficient compressor, hyper heat exchanger, inner grooved copper tubes and optimised air flow to offer efficient cooling with power savings.

Voltas being a pioneer in introduction of labeled products has taken the lead yet again ensuring a sensible and comfortable cooling experience this season. In developing this range, Voltas has kept in mind the market's heterogeneous nature, with its diversity of priorities, preferences, income groups and aesthetic tastes. However, certain key attributes remain standard right across the spread of models. These include:

- The new eco-system technology, detecting and helping neutralise harmful bacteria and suspended particles to maintain indoor air quality
- Scroll compressor in select models, which enables better and efficient cooling.
- Self-diagnosis, auto-louver step adjustment, optimized cross-flow vane and other intelligent features.
- Energy-efficiency, addressing rising consumer consciousness about 'green' issues, and the larger considerations of sustainability.
- Low operating costs, with a sensible cooling solution for every household.

Voltas playing a pioneering role

India's first split Acs

India's first ACs priced under Rs 10,000

India's first ductable split ACs

The revolutionary 'Slimline' design

The first to introduce microprocessor control in ACs

The first to aggressively promote energy-efficient cooling in India

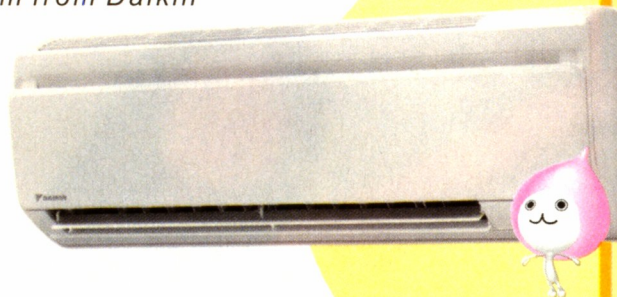

The mood at Voltas is ambitious and optimistic, says Pradeep Bakshi (Senior Vice President and Deputy. Chief Operating Officer), 'You will see a lot more in the coming days from Voltas this will increase awareness about energy-saving and provide consumers a more comfortable and sensible cooling solutions.'

Bakshi exudes confidence that the brand will see significant growth in sales volumes, with the onset of harsh summers.

The push for growth is backed by extensive groundwork to ensure reach and availability across the spectrum. The retail footprint has been augmented to five thousand touch points, while the service infrastructure has been tuned to greater speed and reach.

Calm from Daikin

The Dollar twelve billion Daikin Industries is a multi product company with the air conditioning business comprising about eighty eight percent of its global business. It has a ten percent share in the residential air conditioning market and thirty six percent in the commercial air conditioning in Japan. In India, the company has a market share of more than fifty percent in its respective segment. Sales to commercial establishments constitute about seventy percent of Daikin India's sales while sales to the household market segment constitute the remaining thirty percent.

With a well-established presence in eight major world markets, it is targeting to be a global leader in air-conditioning. Daikin is the only air conditioning company worldwide which manufactures everything on its own from refrigerants till compressors.

Daikin air conditioning has guaranteed a steady stream of technologically advanced air conditioning from Daikin worldwide product's portfolio to the Indian market.

Daikin India distribution network in India includes eleven sales and service offices and three spare part centers. All these locations have trained manpower, stocks of necessary spares and are equipped with the tools and other equipments to provide service to customers.

In addition Daikin has more than two hundred eighty dealers across the country that are fully equipped to handle all activities related to sales, service and installation.

Daikin's global philosophy is 'Quality First' this is clearly reflected in the value that the brand delivers. Low noise level, low power consumption, cooling efficiency, ease of installation, high reliability are features which are all targeted to improve the quality of life.

**Air conditioners are not only an ardent need, these are life style indicator too. At home, in office or in a shopping arcade, air conditioners are adding to our daily dose of happiness. It is difficult to even imagine a shopping spree or a comfortable family lunch in a restaurant without the cool ambience provided by a powerful air conditioner, working quietly, bringing smile on the face of the people. The economy owes significantly to these air conditioners. Eight to ten hours spent in office or at different work places will become so mundane and ineffective without being able to beat the heat. Apart from keeping our home's and interiors cool we may also like to spend some time in the malls and multiplexes which are all air conditioned. One could also hit the air conditioned local library, and read a good book. A dip in the neighborhood swimming pool is another great idea to chill out !All cheers to the Air Conditioners for making our lives perspiration free!**
