

have is our infrastructure deficit. We have to build our rural and urban infrastructure. In this infrastructure deficit the biggest challenge is roads, which cater to everybody. And roads are just not merely connectivity. Roads impact agriculture, trade and industry. Roads generate economic activity. We have undertaken the largest road-building programme and in its success lies the transformation of many parts of India. We have strong fundamentals in GDP to investment to savings. We have a young population which is raring to go and it is on this that I think the Government and political parties will have to focus so that they are recognised by the electorate as agents of change. When I look back at the last time I was here, change has taken place, in the government, in the way the UPA perceived government and the way the world perceived India.

“We need a strong political will to bring about change”

NITIN GADKARI BJP PRESIDENT

When I talk of development, I talk not from the NDA or UPA point of view. My party is committed to the progress of this country. For industrial development we need four things: water, power, trans-

port and communication. I want to suggest to Kamal Nathji that you give special economic zones to the most backward areas in the country. We want decentralised industry in backward areas where we can increase both employment and per capita income. We presently have a shortage of 55,000 MW power and 55 per cent of the people are not getting power. So we have to prioritise there. Now about roads. A US President once said that American roads are good not because America is rich but America is rich because American roads are good. The prosperity comes from roads. The country is going in the right direction in this sector. As far as communication is concerned, I am not talking about politics on this platform because it is good whether it was started by Rajiv Gandhi or Pramod Mahajan or Mr Maran or anybody else, the sector is on the right track. I am worried about agriculture. When there is a surplus of production, farmers don't get good prices. The expenditure cost for a farmer per acre is very high and agriculture is day-by-day becoming economically non-viable.

Lastly, the country needs a development approach. Some argue for communism, socialism or capitalism, I am not related with any 'ism'. I am talking about per capita income, GDP and progress for which we need public-private initiative in every sector. We have challenges like poverty, unemployment, farmer suicides and with a strong political will and development-oriented approach in all political parties we can change the socio-economic scenario of India.

PROTECTION UNLIMITED

For over 25 years, Polymer Nets of Tuflex India have been an undisputed leader in providing protection to homes against insects and pests and to farms, orchards and gardens against excessive sunlight. As packaging material, these nets provide protection to fruits, vegetables and toys. These nets also find applications in AC grills, windmill rotors, construction of roads, landfills, runways and railway tracks as well as sericulture, poultry and many more.

World-class Solutions in Flexible Packaging

In the year 2008, TUFLEX INDIA set up a world-class infrastructure to bring to you the highest quality PRINTED FLEXIBLE PACKAGING LAMINATES & POUCHES for a range of applications in Tea, Sugar, Milk, Confectionery, Seeds, Lubricants, RTE Foods, Detergents, Cosmetics, Spices, Wafers, Atta, Edible Oil, Rice and other consumer products.

Our flexible packaging unit is equipped with state-of-the-art European machinery for printing, lamination, slitting, pouching, laser marking and quality testing. Our quality systems are certified under ISO 22000:2005 indicating the highest standards of Food Safety Management and hygiene levels to protect your valuable products. With these unmatched facilities, backed by a team of highly trained personnel, we can provide solutions to meet your requirements for superior quality flexible packaging laminates.
