

HAPPY FEAT

No longer a part-time course, animation has finally found a place in the mainstream higher education

James Cameron's Avatar may have revolutionised filmmaking in Hollywood, in India, it has also opened the doors for another prospective career option. There is a growing demand for trained animation professionals in various industries. And to address the same MAAC has tied up with IGNOU to provide a full-time three-year bachelor's programme in 3-D animation and visual effects. The purpose is to churn out well-rounded professionals who can rise within the organisation and become entrepreneurs. In addition to detailed technical and creative skills, the curriculum would impart soft skills and business production management training. Admission will be

offered on the basis of performance in the entrance test followed by an interview. Looking at the rate at which the Indian animation industry is growing, India will require close to 3 lakh animators in the next two years. Media organisations, production houses, studios and advertising agencies provide employment opportunities to aspiring animators. Students will undergo training on realistic film making and how to create 3D models.

■ ELIGIBILITY

Basic school education and a creative mindset

■ INSTITUTES

Indira Gandhi National Open University (IGNOU) with Maya Academy of Advanced Cinematics (MAAC)
