

TRAIL OF DEATH

Shramjeevi Express, near Jaunpur, Uttar Pradesh, July 28, 2005

IED kill 10 passengers and injures 79 on the Patna-New Delhi train.

Delhi, October 29, 2005

Three serial blasts before Diwali kill 62 people.

Varanasi, March 7, 2006

Three explosions at Sankat Mochan temple and railway station kill 21.

Mumbai, July 11, 2006

Seven bomb blasts in six local trains at peak hour kill 209.

Hyderabad, August 25, 2007

Twin blasts at garden and snack stall kill 42 people.

Lucknow, Varanasi, Faizabad, November 24, 2007

16 people killed in blasts in court complexes in the three cities.

Jaipur, May 13, 2008

Nine blasts in marketplace kill 63 people.

Ahmedabad, July 26, 2008

22 IED blasts at 17 places kill 53.

Delhi, September 13, 2008

Five blasts in various locations kill 30 people.

Pune, February 13, 2010

Eleven killed as IED explodes in a popular restaurant.

cks carried out by the Karachi Project since 2005.

There were a few tents, four instructors and a few sentries. For one month, they trained us in the use of chemicals and locally available materials to fabricate IEDs. We were never told the location of the camp, but when we faced the rising sun, the sea was to our right. One day, one of the trainers pointed out a Pakistani border outpost on the Iran border," reads the confession of a militant trained in one of these camps. If this sounds exactly like the training given to hundreds of Pakistani recruits

in Pakistan occupied Kashmir (POK), there is a subtle but visible difference. Unlike the LET camps in the hills above Muzaffarabad, the five-times-a-day prayer was not mandatory. Recruits in the Balochistan camps were allowed to play carrom and watch satellite television, mundane pleasures denied to the by-the-book jihadis in the POK camps. The trainers were Pakistani army men in salwars. The camps were occasionally visited by evidently higher-ranking officials whom the trainers snapped to

attention and addressed them by that very military salutation, 'sir'.

After completion of the training, many of the agents were infiltrated into India as sleeper cells, waiting for the command to strike. The agencies are unsure just how many operatives passed out of the camps and like Headley and Khwaja indicated, waiting for the signal to strike.

The template for the project was already there. The March 12, 1993, blasts in Mumbai which killed 257 people were executed by the then Dubai-based Ibrahim's gang. The ISI supplied the RDX for the 13 explosions using the same smuggling routes that landed gold, textile and watches in the 1970s and '80s. It trained Ibrahim's lieutenants and foot soldiers to handle, store, and finally plant the explosives.

Ibrahim's syndicate, said the US Congressional Research Service Report released last month, provides an example of how a profit-motivated criminal syndicate morphed into a 'criminal-terrorism fusion model'. It is not the first one. The Taliban funds their insurgency through their formidable drug trafficking structure. But Ibrahim's syndicate is unique in that it has found state sponsorship and shelter. A facility that the Karachi Project has now extended to an assortment of India's most wanted. Mobster Amir Raza Khan of Kolkata, Rasool 'Party', a don from Ahmedabad, and Riyaz and Iqbal Bhatkal of Karnataka and a Tablighi Jamaat maulavi Mufti Sufian Patangiya—a group of fugitives whom one intelligence official calls a "bewildering array of poisonous snakes". Each had good reason to flee into Pakistan. Patangiya was the main accused in the March 2003 murder of former Gujarat home minister Haren Pandya. Rasool was a former accomplice of slain Ahmedabad gangster Abdul Latif Shaikh and Amir, wanted by the police for his role in the 2002 attack on Kolkata's US consulate. Amir, who fled into Pakistan after the attack was recruited by the LET military commander Zakiur Rahman Lakhvi.

The fugitives from Indian justice brought with them extensive knowledge of the lay of the land, local intelli-
