

P N Arora
Managing Director
Yashoda Hospital

Mission & Vision Statement

Q - What is your health care vision?

A- We share a common vision – "To be an integrated global healthcare service provider, recognized for service excellence through quality care, integrity, and innovation.

Q-How unique is your health care mission compared to others?

A-Our mission is to bring healthcare of international standards within the reach of every

individual. We are committed to maintain highest standards in medical education, research and healthcare of the humanity.

Q-Common men are always deprived of superior healthcare in our country. What is your take on this?

A- Since inception, we have been following our aim to extend our services to all the rungs of the society at affordable rates and every patient has equal opportunity to get medical care and attention through the same infrastructure and highly professional health experts.

Q-How unique are your overall medical facilities and manpower strength?

A- Yashoda Hospital always measures its success with levels of standards attained with active involvement of our healthcare professionals and the state-of-the art infrastructure. Incorporating global advancement in the healthcare techniques is our way of life. This provides our end users the opportunity to get high standards of medical services at all times.

Q-Medical tourism is a fast growing industry. How prepared you are for this?

A- We view and review our services compared to the global standards. As mentioned earlier, we always have an eye on bringing global healthcare

techniques to our patients. Our team of healthcare professionals is highly qualified with lot of experience in providing advanced medical services to their patients following modern practices worldwide. We are being visited by the foreign delegates for assessment and tie-up for medical tourism. Most recently a delegation from Ireland visited our institution for Heart Care Facilities which is fully equipped and regularly providing advanced diagnostic & surgical services through its Cath Lab & CTVS.

Q- Modern medical facilities are need of the day for good healthcare institutions. Where does Yashoda stand?

A- You would be happy to note that Yashoda has established centres of excellence for bringing the most modern facilities to the masses. We have state-of-the art centres of Nuclear Medicine, Uroynamics with Lithotripsy, Neurosciences with MRI & CT Scan, Cardiac Care, world-class Operation theatres for all major & micro surgeries, Neonatal, Paediatric & CTVS ICU besides our Intensive Care Unit and ICCU.

Q- How do you rate your Hospitals?

A- We have always believed in the masses rating our services. Today Yashoda caters to the varied medical needs of a large population spread not only in the western region of U.P. but also from Delhi, Noida and Haryana. We are tertiary care referral centres receiving critical patients from a number of hospitals and nursing homes of these areas, everyday. We believe in earning the confidence of people in our institution and always evaluate ourselves with the only yardstick- how quick and satisfied we send them back to their normal life.

We want to set a standard for all our patients by making the most ideal health services approachable to them in the easiest possible manner. We wish to see a disease free society. Our aim is not only to cater to the needs of nearby but to reach all who suffer illness – one or the other. We want to achieve through research and practices, a level of standard medicinal techniques which will eradicate majority of diseases.

■ **YASHODA HOSPITAL-** Diabetic dyslipidemia: management -People with diabetes have a two- to fourfold excess risk of CHD, which is only partly related to elevated glucose levels. Other factors, such as dyslipidemia, are likely to be important risk factors. The type of dyslipidemia that is most common in type 2 diabetic patients is characterized by elevated triglycerides, decreased HDL levels, and a preponderance of small, dense LDL particles. Small, dense LDL particles are thought to contribute to atherosclerosis, even in diabetes patients whose absolute concentration of LDL is not significantly increased. The ADA recommends that diabetic patients with or without CHD, peripheral vascular disease, or coronary vascular disease should receive medical nutritional therapy if their LDL levels are above 100 mg/dL. The goal for treatment is to reach an LDL level of 100 mg/dL or lower. Pharmacologic therapy should be initiated after medical nutritional therapy and glucose control interventions have been used for diabetic patients with clinical CHD and an LDL level above 100 mg/dL. For diabetic patients without pre-existing CHD, the current ADA recommendations are for starting pharmacologic therapy in patients with an LDL level ≥ 130 mg/dL.
