

New Hope for Cancer Patients

FEBRUARY 22, 2010

An explosion of research and treatment is changing the way cancer is treated, considerably boosting survival rates.

“ Even though it is heartening to know that India is at par with developed nations as far as survival rates of cancer are concerned, the fact that it lags behind in clinical research is regrettable. ”

NALINI VIJAYARAGHAVAN, *Thiruvananthapuram*

Banking on Hope

Your cover story clearly shows that cancer patients can hope for better treatment and have greater chances of survival (“New Hope for Cancer Patients”, February 22). Cancer treatment in India now is at par with the West. The treatment now will increase the lifespan of patients because the cancer cells would be dead and inoperable tumours would be taken care of. To prevent a disease, one needs to mitigate the risk factors that may lead to various cancers.

VINOD C. DEXT, *Ahmedabad*

Despite several developments in science and technology, particularly in medical sciences, cure for cancer has been elusive. The disease is so dreaded

Tackling Pakistan

It will be unrealistic to imagine that the outcome of India's talks with Pakistan will be satisfactory (“Why We Are Talking”, February 22). Two monologues don't make a dialogue, nor can diplomatically correct gestures overcome the hostility Pakistan has towards India.

BISHAN SAHAI, *via www.indiatoday.in*

Pakistan is in the clutches of fundamentalists out of its own choice. Normalisation of our relationship with the country would again open doors for them to perpetrate violence on our soil. Violence in India is usually much less when the relationship with Pakistan is strained.

KRSNA KARNA, *via www.indiatoday.in*

that the common man fears even talking about it. It's high time medical experts all over the world worked together and found a cure for this killer disease that has been having a free run all these years.

Burden of Proof

Union Environment Minister Jairam Ramesh's decision to impose a moratorium on India's first genetically modified vegetable crop, Bt brinjal, until it is proved safe for human consumption is welcome (“Cold Storage”, February 22). It is reported that the cultivation of this hybrid crop will have a long-standing impact on environment and human health conditions. There should be no compromise
