

WHAT'S HIDING IN YOUR MAKE-UP

Research reveals that women use about 515 synthetic chemicals as part of their daily cosmetic regimen. And many of these can cause serious health hazards. In India, it wasn't mandatory to list out ingredients on product labels so far. But thanks to the new labelling rules under the Drug and Cosmetics (first Amendment) Rules, 2009, all that is about to change. So be sure to check every cosmetic label, even the so-called natural products.
