

METHODOLOGY

The parameters on which the survey is based

Ma Foi Management Consultants and Indicus Analytics have been conducting an annual employment expectation survey for the last three years. The survey typically looks at about 2,000 firms across all sectors of the economy to estimate the new jobs being created in India's organised sector. With the rapidly advancing pace of economic activity, starting 2010, Ma Foi and Indicus are following employment expectations on a quarterly basis. This dipstick survey precedes our forthcoming quarterly estimates starting April 2010. Estimating total number of new jobs requires base figures on what was the total employment in the organised sector. And no single data source is good enough for all the sectors. The Annual Survey of Industries is better at the manufacturing sector, the Employment Survey of NSSO tends to be highly dated. Various industry associations also provide such data but there is no systematic and rigorous method of assessing it. Indicus combines all these sources to first estimate the geographical, size and sectoral spread of India's organised sector. Senior HR managers and management from a sample of 1,000 firms were contacted in January 2010 and quizzed about their expectations on how many persons they are going to hire a) over the next three months, and b) over the next 12 months. Overall, the expectations for the next three months were quite poor, but since most firms see sustained growth over FY10-11, hiring expectations across the country, across small, medium and large sectors, and across most sectors, were seen to be quite optimistic.

IMMUNE TO RECESSION, THE HEALTHCARE INDUSTRY IS GROWING AT 15 PER CENT

billion dollars is expected to be invested in the healthcare sector over the next five years. By 2012, medical tourism is likely to contribute \$5 billion in foreign exchange earnings.

sion), Eduinfra (setting up schools), IndiaCan (vocational training division), Educomp Raffles (higher education). Says M.S. Venkatesh, its head of human resources: "Besides specialised skills in content development, we are always looking for training managers, sales executives and managers willing to work in tier II and tier III towns."

The growth of this sector will be three-pronged, says Sudarshan of Manipal Education. While core education infrastructure, which comprises schools, colleges, vocational institutes and coaching centres, will grow, all services that support the sector like testing, technological support for education, coaching and assessment, will also do well.

HEALTHCARE

Total Employee Base: 33,66,000

New Jobs: 2,95,000

Over the last 18 months, when most industries were busy restructuring operations, cleaning up books or firing, the Indian pharmaceutical and healthcare industry was adding manpower and giving salary increases. Clearly, healthcare is immune to recession and has been growing at 15 per cent. By 2012, medical tourism is expected to contribute \$5 billion in foreign exchange earnings to the sector. One of the largest service sector industries in India, it employs four million people at present.

Says Harshvendra Soin, chief people officer, Fortis Healthcare: "Healthcare is a growing and evolving sector in India. Changes in demographics, changing lifestyles and greater insurance penetration have led to an increase in healthcare spending. The industry was \$38 billion in 2008-09 and is expected to be close to \$76.4 billion in 2012-13. By 2012, it is expected to generate employment for 9 million people." In the coming years, over one million beds need to be added to reach a ratio of 1.85 per thousand. Over the next five years, \$1 billion is expected to be invested in the healthcare sector.

With such massive capacity coming up in terms of infrastructure, the industry is looking at serious numbers in terms of manpower. If the industry is to achieve a doctor-patient ratio of 1:1,000, it would need six lakh doctors and one million nurses. And if the industry continues to grow at this rate, it has the capacity to create employment for 9 million by 2012.

BFSI

Total Employee Base: 8,52,000

New Jobs: 46,000

Banking and financial services industry (BFSI) may have lost its shine in the post-Lehman world, but the sector remains hot for employment as many public sector banks are increasingly hunting for warm bodies. With 53 being the aver-
