HOT NEW JOBS OF THE DECADE

As India races along the superhighway to growth and a plethora of new career options opens up, longevity of a career is the key to a successful professional life

By Malini Bhupta

If you are looking for a job, make it a point to enquire about the longevity of the function and industry you seek employment in. Apart from outlining the industry and role definition, job sites are now putting down a crucial detail—longevity of careers. In a world where technology obsolescence is a ruthless reality, employees should ask for how long a

skill-set will be relevant. Every few years some skills and industries are considered "hot" or "sought after" and then the demand for these skills either dies, if the sector is rendered redundant, or it tapers off. For instance, billions of dollars were spent on the y2k phenomenon and for years techies working on it were the most sought after. But the scenario changed after 2000. Today, cloud computing is a big thing in IT and those who have been
