action but is financially
more rewarding too.

India to decode reams of company data so that they can fast-track growth, improve sales, reduce customer churn and get better insights into their businesses. As a research analyst, you can help companies forecast sales, consumer demand and position their brands better.

The voice-based business outsourcing may be under threat, but the knowledge-based outsourcing activity is still going strong. The job of a research analyst would include data mining, data manipulation and applying predictive models to arrive at solutions. With an increase in demand for people with skills in numbers, econometrics and mathematics, the salaries are doubling with demand. Sudeshna Datta, co-founder of Absolute Data and Research Analytics, a KPO, says, "There is tremendous potential and career enhancement opportunity in analytics. The next 10 years will see good growth in the sector as business is flowing in from India as well overseas."

DIGITAL SERVICES

India is not just one of the largest mobile phone markets in the world with 524 million users, but also a big consumer of digital content, be it entertainment, music or games. With the launch of 3G networks, a host of new services and applications will be laun-

ched soon. And cellphone users will be buying things using phones, watching films on it, and downloading games, music and videos too. All these services will be conceptualised and provided by content and digital experts. Known as the value added services (VAS) industry, the size of this market in India today is Rs 5,000 crore. Globally, mobile entertainment is a \$32-billion industry and gaming is \$28 billion.

Like any other service, this too delivers entertainment and other commerce-related services to consumers but the interface is through a mobile phone. In the next few years, this segment will create a host of new jobs and opportunities. So, those with creative skills can look at designing innovative WAP sites and those interested in the technology piece can arm themselves with a certification in JAVA, C++ or J2ME. However, a large subset of the digital services space will be mobile VAS and gaming. If you have experience in media, entertainment or technology, you can write games, design characters

GAME DESIGNING WILL EMPLOY A LARGE NUMBER OF PEOPLE IN THE NEAR FUTURE

and animate them using technology or come up with services that mobile consumers may want to subscribe to.

The opportunity is great as most of the leading gaming studios of the world such as GameBoxx and Digital Chocolate have their operations in India. Apart from that, even Google and Yahoo have large development centres here. Says Siddhartha Roy, CEO of digital entertainment company Hungama: "The digital entertainment economy will employ a large number of people in times to come. It offers a wide range of career options, from creative to technological."

FACILITY MANAGEMENT

India is going to see many new skyscrapers, malls, IT parks and SEZs. All these residential and commercial spaces require to be managed in an efficient manner. But it's not a janitor's job. Running world-class facilities require engineering and management skills. Corporates invest sizeable funds in creating physical assets such as offices and factories, with several hi-tech electrical and mechanical systems, which need to be maintained so that work proceeds smoothly. Proper maintenance also enhances asset value over years.

9 is India's rank in the world automobile industry with an annual production of 2.3 million units. Under India's automobile mission plan, the industry is set to create 25 million jobs by 2016.
