

MOON B SHIN
President, LG ELECTRONICS
INDIA PVT LTD

It gives me immense pleasure to welcome Honorable President of South Korea Mr. Lee Myung Bak to India on the occasion of 60th Republic Day celebrations as the Guest of Honor.

India is a very strategic market for South Korea not only in terms of the existing trade relations but also there are future business opportunities. The Korea-India Comprehensive Economic Partnership Agreement (CEPA) is expected to further boost sales at the background of reduced tariffs on imported goods from Korea. With the trade pact in effect since Jan. 1 2010, more Korean companies can now be expected to enter India and reap profits in the world's second most populous nation.

We at LG Electronics are able to win Indian consumer's confidence and are applauded in various forums, this has been possible due to persistent efforts of LG to introduce high quality products for Indian market right from the inception of LG India in the year 1997. With the exponential increase in trade between the two nations in the past we at LG aim at exemplifying our reach and presence in the country. Amidst the most challenging times owing to the market competitiveness to the most satisfactory moments of gratitude; the journey so far has been magnificent.

Thus, we would like to thank the Indian Government as well as South Korea President Mr. Lee Myung-Bak for giving us this opportunity.

Choon-Kuhn Kwon
MD, POSCO-India

"Our 12 MTPA steel plant at Jagatsinghpur in Odisha will be a milestone in Indo-South Korea relations."

"After the establishment of diplomatic ties between the two countries in 1973, trade relations between India and South Korea have grown. Today the trade between our two countries is past the 15 billion USD mark. South Korea is now one of the biggest investors in India. The POSCO-India project will add substantially to the growing economic relations between us."

"POSCO-India's mission statement reads 'building better tomorrow with steel'. Wherever in the world we have done business we have ensured that the local community grows with us. CSR for us is an article of faith. In India we have provided scholarships at the University level to hundreds of students because we believe that they hold the key to the nation's future. At our project site in Odisha we are partnering local schools to improve infrastructure and, therefore, quality of instructional delivery. Our health camps in the area have attracted mass participation, improving awareness of health issues and providing relief.

"Our 12 million ton per annum steel plant will transform the area, creating thousands of jobs and helping many businesses. A NCAER study conducted in 2006 has projected that our plant in Jagatsinghpur will create nearly 8.7 lac jobs across many sectors.

"Just as we did in Pohang and Kwangyang in South Korea, we will do another economic miracle in Jagatsinghpur".

J S Shin,
President & CEO,
Samsung South West Asia HQ.

The Samsung story of innovation has caught the imagination of millions of consumers across the world. And it's this technology innovation that is giving Samsung an edge in the global arena.

With 25 Technology and Design R&D Centers in countries across the globe including India and an R&D spend that is over 9% of its global turnover, Samsung is relying on product innovation to reinforce its position as a digital technology leader.

Samsung is taking the lead in introducing products that are energy efficient, environment friendly and catering to the needs of the Indian consumers. Largest range of 5 Star rated refrigerators, star rated air conditioners, energy efficient LCD TVs and Monitors, environment friendly LED TVs are only a few examples of the Company's commitment towards introducing environment friendly technologies for its Indian consumers.

Keeping in mind the needs of Indian consumers, the Company has developed and introduced products like the Solar Guru – the world's First Solar charging mobile phone in the Indian market; Stabilizer free refrigerators, Cool pack feature in refrigerators to ensure cooling in spite of power cuts are only some of the examples of the Company's products that best meet the needs of Indian consumers.

Samsung India has also set a benchmark in terms of its manufacturing prowess. Samsung is the first Company to introduce and manufacture LED TVs in India. Today Samsung enjoys the No.1 position for products like LED TVs, LCD TVs, Slim TVs, Side by Side Refrigerators, and Touch screen mobiles. Samsung's world class manufacturing facilities in Noida and Chennai for LCD TVs, Flat TVs, Refrigerators, Washing machines and Mobile phones are helping the Company produce top quality products to support its business needs. Samsung's Noida manufacturing facility enjoys the highest productivity amongst all Samsung subsidiaries for products like CTVs, Refrigerators and Mobile phones.

We want to root ourselves in the socio- cultural fabric of the Indian society on the strength of our products and services as well as our corporate social responsibility programs. We want to make Samsung a loved and respected brand in India and Samsung India, the Top Electronics Company in India." States Mr J S Shin, President & CEO, Samsung South West Asia HQ.
