

"Service to Man is Service to God", its said.

But, how many service providers out there can pride themselves in giving mankind the most precious gift there is...the GIFT OF LIFE? In a world where professionals are driven by commercial gains and consumerism, how many professions you know are driven by sheer compassion? None, but one, and that ONE is the noble profession of medicine and all those associated with it! Hospitals and medical professionals, who are the key deliverers of these selfless services, undertake tireless research and engage in constant re-invention to make this world a healthier, happier habitat for mankind.

In India, a country where hospitals are viewed as the abode of the almighty himself, one hospital chain has emerged in recent times as the "fountain of life" for people ravaged by deadly diseases and agonizing ailments. Over the last decade, this institution, with its unquestionable commitment to serving humanity, has given many of its inmates a new lease of life, thereby giving many families a reason to smile...a reason to hope! This is the outstanding and compassionate health care facility, the GLOBAL HOSPITAL & HEALTH CITY. Nestled in the lap of nature in Chennai and situated far from the madding crowd, this fast-growing hospital group was founded in 1998 by Dr. K. Ravindranath, an internationally renowned surgical gastroenterologist and his associates.

Offering facilities like tertiary level super-specialty care and multi-organ transplantation services, Global Hospital today has become a

Dr. K. Ravindranath

leader in India in performing liver, heart, lung, kidney as well as bone marrow transplantation. Equipped with personnel with rich experience and impeccable credentials, and with state of the art equipment and technology, the hospital aims at offering world class care at affordable cost and producing results at par with the best in the west. With doctors and staff going an extra mile in service of the patients, the Global Hospital has become the destination of choice for all discerning patients.

However, what really turned the world's attention towards the Global Hospital is its path-breaking work in the realm of organ donation and transplantation. In fact, on 16/09/09, the eyes of the entire medical fraternity were on the Chennai premises of the Global Hospital, where the first ever split liver transplantation was successfully performed. Split liver transplantation involves dividing a cadaver donor liver into two halves for transplanting it to two patients. Thanks to this timely and innovative procedure, a young girl from Mumbai and a woman in the last stage of a liver disease now have a future to look forward to. The Mumbai girl suffered from a rare liver condition called crigler najjar syndrome, which causes jaundice from birth. If this jaundice is not treated properly, it can
