

cause neurological damage. Prof. Mohamed Rela, one of the world's leading liver transplant surgeons with over 1200 liver transplants to his credit and who has been awarded a chair (professorship) from the prestigious Kings College Hospital, London, performed a novel procedure on the girl, called the auxiliary liver transplantation, using the split left lobe from a donor. This process was performed for the first time in India. The donor was a young man who died of a road accident in Salem. Though the life of their own son could not be saved, the parents of the boy committed themselves to the cause of saving other lives, and as a first step, benevolently donated all his organs for transplantation; owing to their humane gesture, the hospital had a liver fit enough to save two lives. The liver was split into two where a small left lobe went to the young Mumbai girl and the larger right lobe was reserved for the older woman. In over 20 hours, a team of 6 surgeons headed by Prof. Mohamed Rela, 6 anesthetists and a large number of support staff, completed both the transplantations successfully. After scripting such incredible success stories Prof. Mohamed Rela, has recently performed India's first Bowel Auto Transplant Surgery.

And having on board some of the most awe-inspiring minds of the world, such as Prof. Mohamed Rela, it is no surprise then that the Global Hospital chain is fast spreading its wings. With 2 hospitals functioning in Hyderabad, and 1 each in Bangalore and Chennai

the group setting up its services at Parel in Mumbai ( a 18- storey Project complete by 2010), The Global Hospitals Group has further expansion plans for starting hospitals at Kolkata, Delhi and Bhubaneswar by 2012. Global hospital believes in multi disciplinary teamwork and sets benchmark in quality, safety and innovation. In line with its vision of providing affordable quality health care, the group has setup strong inter disciplinary capabilities, all aimed at improving patient safety and delivering superior clinical outcomes.
