

"Use your head and follow your heart"

Learn more about the heart healthiest nuts: Pistachios.

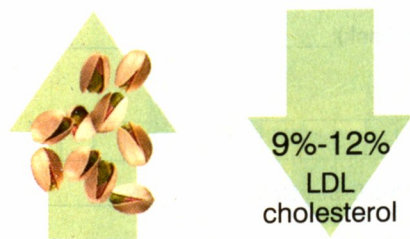

Healthy History of Pistachios and Almonds

Pistachios and almonds share a centuries long tradition in India. While almonds are commonly known as "brain food", the benefits of pistachios may not be quite as well-known. So for all of you who enjoy snacking on pistachios this winter, here's some good news.

Brain Food, Meet Heart Food

One to two handfuls of pistachios may be just what the doctor ordered. Leading research has found that eating 43-85 grams (74-139 nuts) of pistachios per day lowers "bad" LDL cholesterol levels by 9 to 12%.¹

According to the United States Food and Drug Administration: "Scientific evidence suggests but does not prove that eating

1.5 ounces (43 grams) of pistachios per day, as a part of a diet low in saturated fat and cholesterol, may reduce the risk of heart disease."

Pistachios are the Fruit of Nuts

Pistachios have a vibrant purple skin and a richly green kernel making them unlike any other nut. These colors indicate healthy content within the nut.

The purple skin contains anthocyanin, a plant nutrient that may help prevent chronic diseases. The green kernel contains lutein, which helps to prevent the most common form of blindness in older adults.

Pistachios are the "Skinny Nut"

Pistachios are one of the lowest calorie, lowest fat nuts.

In-shell pistachios take longer to eat, encouraging snackers to slow down and be more conscious of what they've eaten, so they eat less.³

Official Dietary Guidelines for Healthy Living

The Dietary Guidelines for Healthy Living, released by the Ministry of Science and

Technology and Diabetes Foundation (India), help consumers choose foods that offer a nutritionally sound diet and that help prevent obesity and diabetes. Pistachios, mentioned in the dietary guidelines, are a source of monounsaturated fatty acids and provide 10-15% of the energy needed in order to maintain ideal weight and health in Indian adults.

Dietary Guidelines: Aim for a total intake of 25 to 40 grams of dietary fiber per day.

Pistachio Solution: A 25 gram serving of pistachios adds 2.6 grams of fiber. That's more than most other snack nuts.²

Dietary Guidelines: Protein should provide 10-15% of the total calories needed in sedentary to moderately active individuals to maintain healthy muscles and immune systems.

Pistachio Solution: Pistachios are one of the highest protein nuts, offering 5.3 grams per serving.²
