

MASTERMIND INDIA

Spirit of India Special

| By Saritha S. Balan |

A mechanic working in the Gulf for a handsome salary, Bhargavan Mohanlal, could not have asked for more. But he did. So he came back home to

Alappuzha in 1987 and started a fishing boat repairing workshop. Business was good, and he soon bought his own fishing boat. That's when Mohanlal felt high fuel costs biting away a large chunk of his profits. For a man working as a mechanic and technician since 1972, this translated into action: Mohanlal improvised on marine diesel engines to make them fuel-efficient and reduce their weight.

Mohanlal was always keen on

finding something new which would reduce the cost of fishing and cut down on pollution too. "I observed the inconvenience of the local fishermen while fishing with boats using diesel engines or petrol-start kerosene-run engines with in-built gearboxes," says Mohanlal. He realised that the boats with diesel engines had a long tail propeller system without a gearbox, which affected their manoeuvrability. The

LIGHTNESS OF BEING
