

Let's build a smarter planet.

As we move toward a globally integrated economy and society, we find ourselves at a moment of enormous challenge – and of even greater opportunity.

The world isn't just getting smaller and flatter, it is actually becoming smarter. Today, almost anything – any physical object, process or system – can be instrumented, interconnected and infused with intelligence.

The question is, what will we do with that? Beginning last year, IBM launched an ongoing conversation about some of the most critical issues and most promising opportunities facing our planet. We have explored what it means to make the systems by which our world works, work better – our energy, our banks, our government, our telecom, our IT...everything. The list is long, and the dialogue has just begun.

We believe that smarter systems can and will make a real difference to the prosperity of the global economy, the sustainability of our planet and the health of global society. We also believe that IBM is in a unique position to help – thanks to our depth of resources, expertise and experience. We can help provide enterprises, institutions and governments of all sizes around the world with the tools and thinking necessary to build a planet of smarter systems.

The future now beckoning to us is one of enormous promise – a future we can build now if we open our minds and let ourselves think about what our world could be.

Let's build a smarter planet. Join us and see what others are thinking at [**ibm.com/smarterplanet/in**](http://ibm.com/smarterplanet/in)
