■ LATEST TREATMENT OF VARICOSE VEINS-

What are varicose veins?

The key function of the venous system is to transport deoxygenated blood from the various organs & parts of the body back to the heart. In healthy veins, valves located within the veins prevent the venous blood from returning back down the leg. When these valves no longer function correctly the vein is termed 'incompetent' and venous blood collect in the veins, causing them to enlarge.

What is laser Surgery?

Laser surgery is a gentle and quick method for the treatment of Varicose Veins. **Laser Techniques**

In this technique, the laser fiber is inserted into the affected vein through a small cannula and the affected vein is closed from inside (without removing the vein) by laser thermal energy. The treated leg appears smooth and free from pain and swelling. Normal activities can be resumed shortly after laser treatment. *Quick treatment with minimal discomfort.*

What is Peripheral Vascular Disease ?

Peripheral Vascular disease, (PVD) is a disease involving the arteries and sometimes the veins of your limbs. The lower limbs are involved more frequently than the upper limbs. The underlying problem is a reduced blood supply to the tissues of the limb. This usually occurs due to the progressive narrowing of the arteries with age and deposition of fatty material in the arterial wall.

Who is at risk ?

People who smoke or have smoked in the past, people with high blood pressure and diabetics are at particular risk of developing this disease. It usually affects people over the age of 50 years.

What are the symptoms ?

The common symptoms of this disease are:

1. Cramping pain in the calf, thigh or buttock on walking which is relieved by rest.

2. Severe burning pain in the toes or foot, present all the time, but more evident at night or when sleeping flat.

3. Blackening of toes.

4. Non-healing ulcer on foot or leg.

What are the possible complications ?

Apart from causing limitations to your lifestyle, the progression of this disease can cause loss of limb and life. So, help yourself and lead a better quality, longer life.

What can be done ?

One can actually help themselves in the early stages of the disease. But it is most important to see a specialist, who can assess the extent of disease.

A diagnosis can be made by a clinical examination and accurate non invasive imaging of the arteries.

Bypass surgery or balloon angioplasty are both successful in selected cases.

According to WHO 16% of cardiac patient would be Indian by 2011. As the rate of urban Indian has increased from 4% to 11% in last 3 decades because of sedentary life style and dietary habits due to stress work environment, changing socio-economical behavior.

Yashoda heart care has been the pioneer in providing world class treatment with dedicated focus on personal care with superior emergency cardiac care with state of art ICCU, Cath Lab and CTVS department. This complete department is geared up to meet any kind of cardiac emergency with full cardiac monitoring capabilities. Our complete cardiac unit managed by experienced and skilled doctors and professionally trained, courteous & compassionated nursing and other paramedical staff working round the clock. There are facilities not only to Thrombolyse acute myocardial infarction but also to take up primary angioplasty and CABG. We are offering facilities for temporary as well as permanent pacemakers and ICD Implantation in the case of complete Heart block, dilated heart along with repair and replacement of Heart Valve.

The overwhelming responses since last 20 years inspired us to take up very crucial area in clinical medicine i.e cardiac emergency. Because our mission

is to create an environment of efficiency in Health care through high quality resources. We also recall with pride that our cardiac emergency department was the first in western Uttar Pradesh and NCR. We have fully equipped ambulance, paramedics - specially trained to render basic life support, advanced cardiac life support and administrating elaborated first aids.

It is our privilege that, our cardiac department is nurtured by Director Dr. Anil Bansal who is heading our department of Interventional Cardiology. He has vast experience, of more than 20 years, in Interventional and nuclear cardiology in United States. He was a director of Cath Lab in east Carolina University School of Medicine. He was a president of Interventional Cardiology and Vascular consultant in Orlando, Florida.

We have all cardiac facilities under one roof for preventive, diagnostic, therapeutic as well as cardiac rehabilitation program run by expert cardiorespiratory physiotherapist and nutrition expert for counseling risk stratification and lifestyle modification for healthy heart.
