■ HEARING AIDS: COMFORT LISTENING-

Hearing aids have come a long way from bulky mechanical devices like 18th century ear trumpets and speaking tubes to contented and sophisticated devices. Patients used to purchase them but failed to get used to them or used them occasionally, as the usual complain pertaining to it was the intensity of noise, feeling of heaviness, problems listening to own voice louder(echo). Widex a renowned name amongst the world's foremost companies in digital hearing aid technology is leading the way in designing contemporary, ergonomic and state-of-the-art hearing aids. When we fit a hearing aid two things should be kept in mind – the type of hearing loss, and the lifestyle of the individual. For example an old lady having more of one-to-one communication would have a different hearing requirement, Vs a CEO of a company. A good example of a hearing aid which has a mind of its own to take care of such issues would be the Mind 440 by WIDEX, we have seen excellent results with the end users. If you are not satisfied with your hearing aids, do not get disheartened. I will be happy to help.
