

"If you're serious about your dream,
we'll take your dream seriously."

We don't think the ability to imagine, create, or discover should fade with childhood—there are careers where those are valuable assets. Preparing people for those careers is what we do every day.

Almost a decade back, AAT-SAE began in India, as a dream to create a place where people could learn how to take their passion for entertainment and turn it into a career they loved. It started with music and sound, but our dream quickly grew to fit the dreams of our students until it was bigger than we could have ever imagined. Film, design, games, animation, the business of the entertainment world... as the years go by, the dream continues to grow, and we are humbled by the success of our graduates as well as the passion of our teachers and mentors, all of whom contribute to making this what we think is one of the most unique educational communities on the planet.
