

[illegible]

Snoring is an extremely common condition, caused by vibration of throat tissues due to air turbulence upon inhaling. **Snoring** can be very noisy and disturbing for person/s sharing the same space while sleeping.

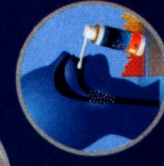

Internationally acclaimed Silence™, when sprayed in the throat, acts on the throat tissues from the first usage. It is formulated with a unique bio-adhesive formula to last through the night. Long term regular use of Silence™ stabilizes the throat tissue and gradually reduces the **snoring** sound night after night.

Silence™ has a pleasant mint taste and is extremely convenient to use.

Available at selected chemist outlets.
