INSIGHT

Sanjay G. Dhande

Director, Indian Institute of Technology-Kanpur

"We don't fear foreign institutions coming here. Before these universities are allowed in India, we would be setting our feet in some countries, including the US."

Institute at Agricultural Gardens in Kanpur with just 100 students, but today, in its golden jubilee year, it has 4,500 students with the student-teacher ratio being 10:1. In affirmation of its commitment to excellence are its mechanical and nuclear engineering and technology departments which were instrumental in designing Jugnu,

a 3.5-kg nanosatellite, which was handed over to the ISRO in March this year. Director Sanjay G. Dhande calls these successes a result of the institute's passion to excel in the field of teaching, research and innovation. "While maintaining our excellent undergraduate programmes, we want to scale new heights in our research and postgraduate programmes. We are very keen to use technical developments for the benefit of society."

The undergraduate courses offered here have the reputation of being the toughest in the country. Professor Nalinaksh S. Vyas, head, department of mechanical engineering and nuclear engineering and technology programme, IIT-Kanpur, however, believes that undergraduate education in the country is predominantly faculty dependent and to overcome faculty shortage, it should be made branchless. Compulsory course content should involve fundamental and generic courses from all basic streams and the student should be allowed to choose his/her area of specialisation in specific areas but only at the postgraduate level. The quality of research here is exemplary. They have undertaken
